

REMOTE VIEWING PRACTICUM

Through remote viewing, out-of-body experiences, spiritual insight, or miraculous healing we recognize, at some level of awareness, the true nature of ourselves as individual sentient elements of a greater non-local consciousness. The value of remote viewing lies in the objective nature of the process itself; a protocol-driven, scientifically tested perceptual technique/experience to acquire and describe information seemingly separated from the “viewer” and his or her physical senses by distance, shielding, or time.

Your first-person experience of the remote viewing process, the realization that you truly are more than your physical body, that you are a boundless sentient being immersed in a realm of non-local consciousness leads to an understanding of a *hierarchy of meaningful interconnections*. Such a sense of connection appears to lie outside the confines of space and time and yet, in some way resonates deeply with all of our experiences in the everyday world.

The *Remote Viewing Practicum* is a graduate-level program, a workshop-based educational experience. Our approach to remote viewing involves a team concept: a monitor or interviewer, a remote viewer, and a judge. We feel that it is through experiencing the *whole* of the remote-viewing process that one can realize one’s true nature. During the practicum you will participate as the monitor (helmsman), the remote viewer (perceiver and illustrator), and the judge (evaluator). It is through these experiences that you too will recognize the nature of mankind as sentient beings participating in a non-local universe.

After several days of training and practice in a variety of different remote-viewing techniques or styles, monitor/interview skills, and judging protocols, you will participate in a series of blind, independently judged remote-viewing trials. The Hemi-Sync® exercises include RV-10 –letting to and turning inward, RV-12 – connecting and listening, RV-15 – becoming aware, and RV-21 – space/time transcendence.

Skip Atwater, Research Director at The Monroe Institute, is the primary trainer of the *Remote Viewing Practicum*. Years ago, Skip was the Operations and Training Officer for U. S. Army Intelligence remote-viewing surveillance program. He worked closely with the scientific efforts of SRI International and trained career-minded professional intelligence personnel to remote view. Using the Hemi-Sync® signals and procedures from the work Bob Monroe did with talented remote viewers in the secret U.S. government project; this practicum is designed for the now growing number of remote viewers in the 21st Century.
